# HAT COMPONENTS

**VISOR** A fabric-covered round piece attached to the front of the cap.  
  
Made to help shield the eyes from the sun, visors come in a wide range of shapes and curvatures to cater to a variety of headwear styles.

**CROWN** The distance from the bottom edge of the cap to the top of the head.  
  
This helps determine the depth of the cap. A smaller number means the cap will sit higher on the head while a larger number means the cap will sit lower.

**PANELS** Triangular pieces of fabric that are stitched together.  
  
These pieces come together to form the main rounded structure of the cap. Depending on the style, caps generally consist of 5 or 6 panels.

**CLOSURE** The back piece of the cap that determines fit and adjustability.  
  
There is a wide range of closure types such as snapbacks, buckles, and plastic hooks made to give our customers the perfect fit.

**PROFILE** The slope of the cap's crown.  
  
Low-profile caps tend to have crowns that are more angled while high profile caps have crowns that are more perpendicular to the visor.
